

# MAP Migration, accelerate your Cloud Transition!

## What is a MAP Migration?

The AWS Migration Acceleration Program (MAP) is a comprehensive and proven cloud migration program based upon AWS's experience migrating thousands of enterprise customers to the cloud. Enterprise migrations can be complex and time-consuming, but MAP can help you accelerate your cloud migration and modernization journey with an outcome-driven methodology.

MAP provides tools that reduce costs and automate and accelerate execution, tailored training approaches and content, expertise from AWS Professional Services, a global partner ecosystem, and AWS investment. MAP also uses a proven three-phased framework (Assess, Mobilize, and Migrate and Modernize) to help you achieve your migration goals. Through MAP, you can build strong AWS cloud foundations, accelerate and reduce risk, and offset the initial cost of migrations. Leverage the performance, security, and reliability of the cloud.

## Benefits

### Reduce Cost

Decrease your IT costs by moving infrastructure and applications to the cloud, and free up resources to focus on what truly differentiates your business. By migrating legacy applications to the cloud, you can achieve 31% average infrastructure savings.

### Improve Operational Resilience

Strengthen your IT security and increase service availability and reliability, including gaining the ability to respond to rapidly changing levels of demand. Customers who move to AWS from on-premises achieve a reduction of 69% in unplanned downtime.

### Boost Staff Productivity

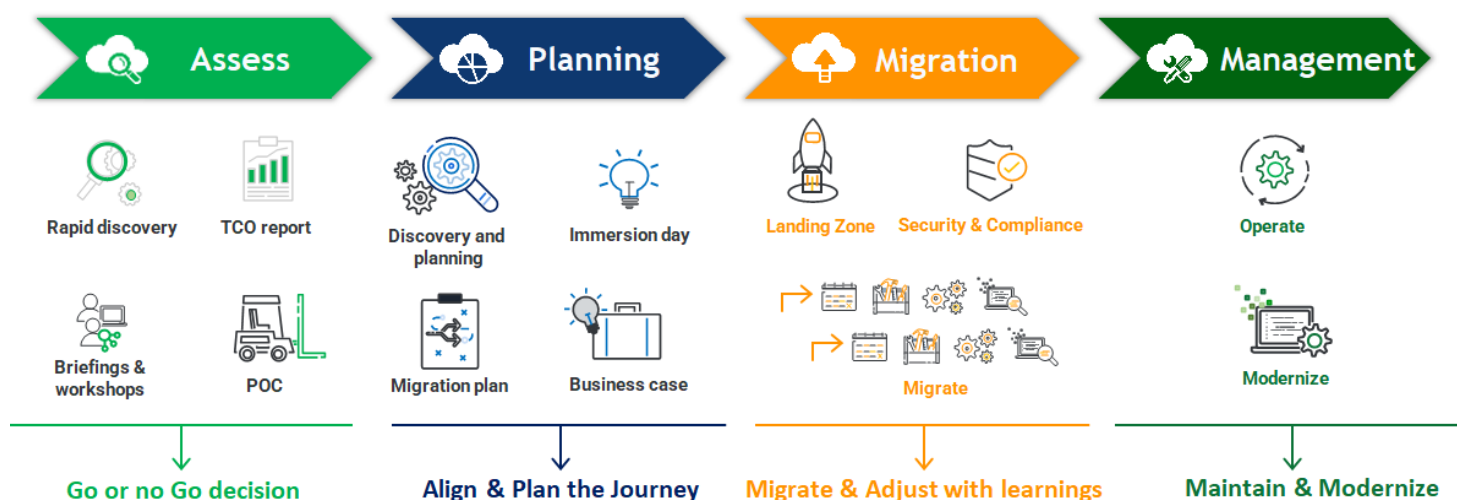

Enable your employees to shift from tactical to strategic work and dramatically scale their efforts by reducing time spent on system administration tasks. Customers who migrate to AWS will be able to run their IT infrastructure management 62% more efficient.

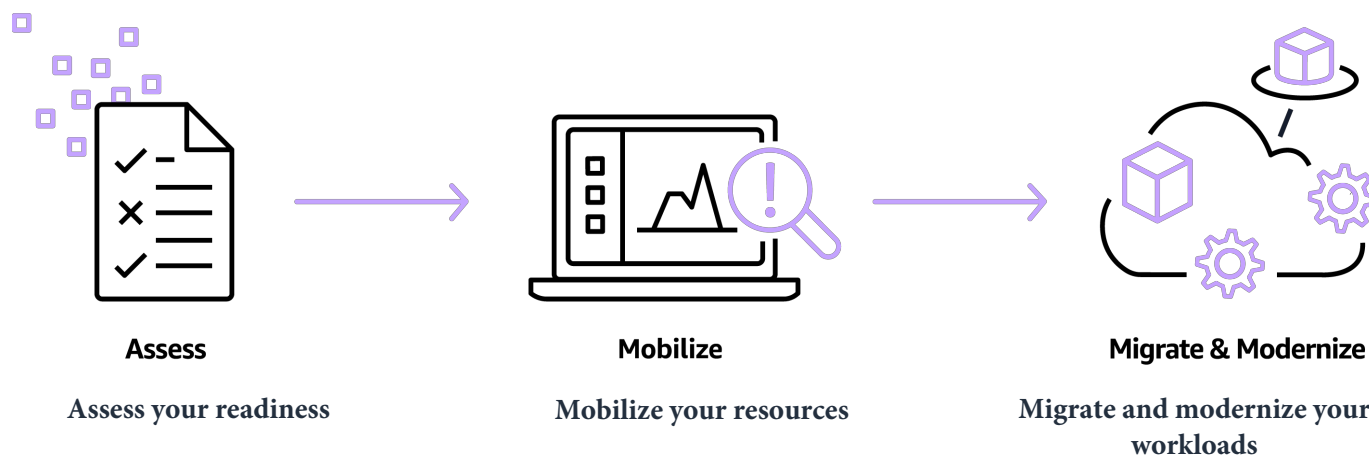

### Increase Business Agility

Accelerate innovation at a global scale by retiring your technical debt and reducing deployment timelines to complete projects faster.

## MAP Methodology

## MAP Phases

The migration readiness assessment (MRA) helps you identify gaps along the six dimensions of the AWS Cloud Adoption Framework - business, process, people, platform, operations, and security. This assessment enables you to identify the capabilities required in the migration and build a TCO model for your migration project.

The mobilize phase helps you build an operational foundation for your migration, with the goal of fixing the capability gaps identified in the assessment phase. The mobilize phase accelerates your migration decisions by providing clear guidance on migration plans that improve the success of your migration.

Magic Beans and AWS help you execute the large-scale migration plan developed during the mobilize phase.
