

Cloud Financial Management empowered by GenAI

Managing and optimizing the costs associated with the use of cloud resources. Getting better insights is now easier & faster.

Overview

CFM (Cloud Financial Management) is the practice of managing and optimizing cloud costs. Efficiently utilizing and paying only for what you need.

Use AI for in-depth analysis and anomaly detection, helping you identify unusual spending patterns and optimize cost allocation effectively.

Our tools not only monitor and report but also predict and recommend, allowing for proactive management of your cloud resources.

Key Dimensions

- ✓ **Cost Visibility & Analytics**
Organize and report costs with real-time visibility that turns raw data into actionable insights.
- ✓ **Cost Control & Optimization**
Manage billing and control costs. AI-driven analyses identify areas for cost reduction and efficient budget allocation.
- ✓ **Forecasting & Planning**
Enhanced planning with flexible budgets.
Use ML to forecast spending and maintain budget control.
- ✓ **Monitoring & Governance**
Real-time monitoring and alerting systems.
Improved financial management strategy and governance.

Business Benefits

Reduced Cloud Expenses

Analyze and reduce cloud expenses. Identify unusual spending patterns through AI-driven analysis.

Improved Cost Efficiency

Maximize cost efficiency with dynamic reports and budget forecasts without the manual overhead.

Stronger Return on Investment

Improve overall return on investment (ROI) of cloud services through proactive management.

Better Cost Allocation

Optimize cost allocation and manage budget allocation more efficiently.
