

Magic Shield

Delivering Cloud Security from the edge

Overview

Magic Shield is a cloud-native cybersecurity consultancy focused on delivering expert security services. We help organizations secure hybrid or multi cloud environments using modern security architectures, automation, and industry best practices.

Key Dimensions

Application Security

- ✓ **Vulnerability & Attack Protection**
Securing your web assets from outside threats directly on the edge.
- ✓ **API Protection**
Control API traffic with automated discovery and strict validation.

Secure Access Service Edge

- ✓ **Zero Trust Network Access**
Secure remote access using identity and least privilege.
- ✓ **Email Security**
Stop phishing and BEC threats with AI behavioral analysis.

AI Security

- ✓ **AI Endpoint Protection**
Secure custom AI apps from prompt injection and data leaks.
- ✓ **Secure AI Usage**
Govern employee AI usage with Zero Trust and DLP.

How can we help

90% Malicious traffic reduction

Our advanced Web Application Firewall (WAF) inspects traffic at the edge, blocking application attacks like SQL injections and cross-site scripting to protect your critical infrastructure from malicious actors.

\$4,45M Average cost of a breach

We mitigate breach risk with a multi-layered Zero Trust model, verifying every request and enforcing strict access controls to prevent the unauthorized access that leads to costly financial damages

30 to 40% of all web traffic is done by bots

We use machine learning and behavioral analysis to separate human traffic from automated bots in real time, stopping malicious bots at the edge without introducing frustrating CAPTCHAs for legitimate users

95% YoY growth of DDoS Attacks

Our automated, always-on DDoS protection is backed by a massive global network. It absorbs even the largest attacks, ensuring your applications remain available and preventing costly service disruptions.
